Antivirals	Ribavirin	No significant effect on clinical outcome
	Ribavirin, Lopinavir-Ritonavir + corticosteroids	Patients who received ribavirin, lopinavir-ritonavir and a corticosteroid had lower 21-day ARDS and death rates than those who received ribavirin and a corticosteroid
Interferon combination	Interferon alfa-1+corticosteroid	Associated with improved oxygen saturation and more rapid resolution of radiographic lung opacities than systemic corticosteroid alone (uncontrolled study)
Corticosteroids	Pulsed Methylprednisolone	Associated with an increased 30-day mortality rate (adjusted OR=26.0, 95% CI=4.4-154.8). Disseminated fungal infection and avascular osteonecrosis occurred following prolonged systemic corticosteroid therapy
Convalescent-phase plasma	Convalescent-phase plasma therapy	Has been used for severe respiratory tract infections including SARS and influenza. A systematic review and exploratory meta-analysis of patients with SARS or influenza treated with convalescent-phase plasma showed a reduction in mortality, but the treatment success was determined by its availability and timely administration
